Description

Casavant Frères ("Casavant Brothers") is the oldest still-operating organ building company in North America.

The company was founded by Canadian brothers Joseph-Claver and Samuel-Marie Casavant (1859–1929), sons of blacksmith and organ builder Joseph Casavant. In 1878, the brothers went to France to learn from organ builders E. et J. Abbey and Aristide Cavallé-Coll. They also toured France, Italy, Switzerland, Germany, Belgium, and England to study significant organs. Upon returning to Canada, they established Casavant Frères in Saint-Hyacinthe in 1879.

Their first two-manual organ was created for Chapelle Notre-Dame-de-Lourdes in Montreal in 1880, and their first three-manual organ for Saint-Hyacinthe Cathedral in 1885 was later listed as historically significant by the Organ Historical Society in 1999.

International recognition came with the four-manual organ for Notre-Dame Basilica in Montreal in 1891. Their first U.S. organ was built in 1895 for a church in Holyoke, Massachusetts. Casavant organs were also installed in France, the West Indies, South and Central America, South Africa, and Japan. In 1930, the company won the Grand Prize at the Antwerp World Exhibition.

Renowned organists like Alexandre Guilmant, Louis Vierne, Charles-Marie Widor, Joseph Bonnet, and others played Casavant organs. After Claver Casavant's death, Stephen Stoot became the artistic director, contributing significantly to the company's direction.

In the early 1960s, with significant input from German organ builder Karl Wilhelm and Swiss organ builder Hellmuth Wolff, Casavant returned to mechanical action organs. Under the artistic direction of Gerhard Brunzema (1972–79), the company aimed for the ideal of North German Baroque organs. Jean-Louis Coignet, the artistic director from 1981, integrated the symphonic sound ideal of French organ building. Jacquelin Rochette has been the artistic director since 2004.

Description

Casavant Frères (Casavant Brothers) is Canada's best-known organ building firm. It was founded in 1879 by two Canadian brothers (Claver and Samuel Casavant), the sons of organ builder Joseph Casavant. Both Casavant brothers had worked in France with John Abbey and Aristide Cavallé-Coll. Before returning to Canada, the brothers traveled extensively throughout Europe, visiting significant organs and builders. The company remains today at the same location Saint-Hyacinthe, Québec where it was first founded. The instrument that is widely considered the firm's first "landmark" organ is the 1891 four-manual tracker organ built for the Church (now Basilica) of Notre-Dame in Montréal.

Casavant's international and sometimes "eclectic" organ building style is represented in the diverse nationalities of the various tonal directors of the firm. Claver Casavant was the first tonal director, and he was succeeded by Stephen Stoot (England), Lawrence Phelps (USA), Gerhard Brunzema (Germany), Jean-Louis Coignet (France), and Jacquelin Rochette (Canada). Each brought their own ideas and perspectives, notably: Phelps (beginning in 1958) with his progressive and innovative organ design concepts, Brunzema (beginning in 1972) with his extensive experience with historical European organs, and Coignet (beginning in 1981), who was one of the world's leading experts on the work of Cavallé-Coll.

The Casavant firm has built several thousand organs on all six inhabited continents. These instruments range widely in every respect, from small portative organs of only a few stops to enormous cathedral and concert hall instruments. Likewise, both the tonal and mechanical approaches to the organs have varied, touching on nearly every organ building trend that took place during the 20th century and ultimately ending with a style that draws on diverse historical and international influences.

Given the convenience of location and a shared border, it was perhaps inevitable that Casavant would build many organs in the USA. These American instruments date from the company's entire history and can be found in every size and style, although the Phelps years saw a particular explosion of American Casavant organs. Opus 3742 was built in 1995 for the First Presbyterian Church of Bellevue, Washington as part of a new church building constructed for a growing congregation. It is an instrument that is generally representative and typical of the church organs Casavant has built in the USA since 1980.

The first priority of nearly all organs built for American churches is that they serve the needs of service playing,

primarily represented by congregational singing and choral accompanying. The instruments' suitability for a variety of solo organ literature follows on from there. American acoustics also tend to be on the dry side (especially when compared with Europe), and thus the voicing and tonal design of the instruments must take that into account. Across its three manuals and pedal, Op. 3742 provides the typical resources useful for American service playing, beginning with the core principal chorus on the Great to support congregational singing. Two enclosed/expressive divisions with both foundation and color stops are especially useful for choral accompanying. Beyond the basics of each division, additional elements such as the horizontal Trompette-en-chamade and the Chimes are also typical of many American church organs of this size.

The French stop names on Op. 3742 reflect primarily Casavant's home in Montréal (where the native language is French), but they also allude to the filtered influence from French romanticism that is a part of many American eclectic organs. (However, Op. 3742 is certainly not actually an organ in true French romantic style.)

The eclectic style elements (drawing on several national traditions) can be seen in various features of the organ. One representative example is provided by the three different undulating/beating stops on the instrument: a French-romantic inspired string "Voix céleste," and Italian style principal celeste ("Voce humana"), and the distinctly American "Flûte céleste" (the earliest examples of which can be found in organs by Murray Harris and Ernest Skinner). That these different elements coexist in the same organ is quite typical of an American eclectic organ.

Although the needs of church music are the primary focus of the instrument's design, as is true with most American church organs of this size and style, organ literature from nearly all periods and national schools can be played relatively effectively, even if the exact sounds might not always be completely historically "authentic." Certainly much American church music written in the 20th century (and especially since 1960) was conceived specifically for an instrument of this kind.

Stoplist/Disposition

Grand Orgue	Positif (expr.)	Récit (expr.)	Pédale
Violonbasse 16'	Principal 8'	Bourdon 16'	Soubasse 32'
Montre 8'	Voce umana 8'	Bourdon 16'	Bourdon 32'
Violon 8'	Bourdon 8'	Diapason 8'	Contrebasse 16'
Flute a cheminée 8'	Flute douce 8'	Flute majeure 8'	Montre 16'
Flute harmonique 8'	Flute céleste 8'	Viole de gambe 8'	Soubasse 16'
Prestant 4'	Principal 4'	Voix céleste 8'	Violonbasse (GO) 16'
Flute ouverte 4'	Flute a fuseau 4'	Octave 4'	Bourdon (RE) 16'
Quinte majeure 2 2/3'	Doublette 2'	Flute a cheminée 4'	Octavebasse 8'
Doublette 2'	Larigot 1 1/3'	Nazard 2 2/3'	Flute bouchée 8'
Cornet III	Sesquialtera II	Quarte de nazard 2'	Flute a cheminée (GO) 8'
Fourniture IV-V	Cymbale IV	Tierce 1 3/5'	Octave 4'
Bombarde 16'	Douçaine 16'	Piccolo 1'	Flute ouverte 4'
Trompette 8'	Cromorne 8'	Plein jeu V	Théorbe III
Clairon 4'	Bombarde-en-chamade (GO ext.) 16'	Basson 16'	Mixture V
Trompette-en-chamade 8'	Trompette-en-chamade (GO) 8'	Trompette 8'	Contre trombone 32'
	Clairon-en-chamade (GO ext.) 4'	Hautbois 8'	Trombone 16'
		Voix humaine 8'	Bombarde (GO) 16'
		Clairon 4'	Basson (RE) 16'
		Trompette-en-chamade (GO) 8'	Douçaine (PO) 16'
			Trompette 8'
			Clairon 4'
			Hautbois (RE) 4'
			Trompette-en-chamade (GO) 8'
			Clairon-en-chamade (GO) 4'

Additional: Récit to Pedal 8', Positif to Pedal 8', Great to Pedal 8', Récit to Great 8', Positif to Great 8', Récit to Positif 8', Chimes GO, Unison Off GO/Pos/Réc, Tremblant Positif, Tremblant Récit, Full organ, Crescendo, 2 Swell pedals (Pos/Réc), Divisional and general combinations
